Latisse

Latisse is an FDA approved prescription treatment for hypotrichosis used to grow eyelashes, making them grow longer, thicker and darker.

You will not be eligible to receive Latisse if: you are under 18 years old, have a history of glaucoma or strong family history glaucoma, pregnant or breastfeeding.

In the event that you become pregnant during use, discontinue use.

Possible side effects may include redness or itchiness along the area of application; this usually resolves within 3-7 days. Hyperpigmentation of the upper eyelid at area of application may also occur.

We recommend using Latisse for the full 16 week program to get maximum results. Discontinuation of product will only result in the eyelashes returning to previous state.

Patient response to Latisse may vary. Successful results depend upon compliance with product.

I have read the above information about Latisse and had an opportunity to have any questions answered to my satisfaction.
